PROJECTS AND REPORTS

IPO Analytics Dashboard	
- Built an IPO dashboard by scraping data from 60+ closed IPOs on Groww using Selenium, storing it in a MySQL database, and visualizing investor-wise subscription rates and listing returns in Tableau. - Practiced real-world data cleaning and transformation using SQL, and explored patterns between investor demand and IPO listing outcomes through visualizations.	
Comprehensive DCF Valuation – Bharat Electronics Ltd	Link
- Developed a full DCF model by estimating WACC using industry capital structure and comparable levered beta (via 2-year regression of BEL and Nifty), and projected FCFF with mid-year convention and sensitivity analysis on WACC and terminal growth rate. - Strengthened my ability to build valuation models and gained practical understanding of regression-based beta estimation, scenario modeling, and long-term forecasting techniques.	
One Page Company Profile – Eternal Ltd (formerly Zomato)	Link
- Analyzed Eternal's financial performance and valuation using key trading multiples while integrating ownership structure, capital breakdown, and recent strategic developments into a holistic one-page equity profile. - Effectively learned to synthesize complex data into concise investment insights and contextualize valuation with business news, ownership dynamics, and capital market developments in 1 page.	

CERTIFICATIONS

Analytics: Power BI for beginners from SimpliLearn , Excel Fundamentals from CFI
