Sardar Patel Institute of Technology

B Tech in Electronics and Telecommunication Engineering

Minor in Computer Engineering

Oct 2022 - Present

CGPA: 8.23 (SGPA: 9.1)

PROJECTS

Spatia | Typescript, Javascript, Python

May 2025 - May 2025

- Developed Spatia, a **Geographic Information System** tool for processing and visualizing complex spatial data.
- Implemented core spatial operations (**Buffer, Union, Intersection, Difference, Spatial Join**) with interactive before/after visualizations.
- Supports **GeoJSON, Shapefile, and WKT formats**, enabling seamless upload, processing, interactive map rendering and real-time visualization of spatial data.
- Integrated intuitive **UI features** such as clickable layers, toggle visibility, and dynamic zoom/pan, to make advanced geospatial analytics accessible to non-GIS users.

SkillShare | Python, Flask

Mar 2025 - May 2025

- Designed a skill-sharing platform that enables users to connect and exchange skills, creating a **peer-to-peer learning ecosystem**.
- Developed an intelligent matching system using the epsilon-greedy algorithm to ensure optimal pairing of skill providers and seekers.
- Implemented a **Reinforcement Learning-based feedback model** to continuously adapt matching accuracy based on user interactions and satisfaction scores.
- Built a Flask-based web front-end integrated with vector databases for efficient skill profile retrieval.

Sentient Electronics | Typescript, ML, ESP32

Oct 2024 - Feb 2025

- Designed and developed a Smart Heating-Ventilation Air Conditioning (HVAC) system to enhance energy efficiency and reduce carbon footprint.
- Engineered a **multimodal system** for seamless integration across all HVACs in a building, improving sustainability.
- Developed an ML model that optimizes energy savings while prioritizing user comfort along with **Anomaly Detection** reducing maintenance costs.
- Developed a user analytics and statistics app and a dashboard to track HVAC performance and usage patterns.

OptimoRoute | React, Django, MongoDB

Apr 2024 - Apr 2024

- Contributed to the development of a web platform designed to optimize trade routes for material and goods transportation across land, air, and sea.
- Assisted businesses in selecting the best routes based on factors like the number of stops and transit points.
- Facilitated multi-modal transport options providing an optimized route that factors in time efficiency, cost-effectiveness, and eco-friendliness.
- Integrated data from supply chain management companies via APIs to enhance route optimization.

SKILLS

Languages: C++, Python, C, Javascript

Web Development: Typescript, React, Tailwind CSS, Fast API

Databases & Tools: MySQL, PostgreSQL, MongoDB, Tableau, Github

POSITIONS OF RESPONSIBILITY

Google Developers Students Club | Secretary

Jul 2023 - Sep 2024

- Led a **50-member committee** in planning and executing tech events aligned with Google's annual roadmap.
- Organized and led **hands-on workshops** on Google Cloud technologies helping the chapter **achieve Tier 3** in the Google Cloud Study Jams program, **more than 40** students completing it

Training & Placement Office | Training & Placement Coordinator

Sep 2023 - Sep 2024

- Served as the primary **point of contact** between the institute and leading corporate partners, ensuring seamless execution of **recruitment drives**
- Organized 10+ networking events, enabling **150+ connections** of student-industry mentorships with **80%+ positive feedback** on network growth

ACHIEVEMENTS

HERE India Hackathon - Secured 1st Runner-Up Position in the 30-Hour Hackathon

May 2025

AICTE National Conference - Project selected for exhibition at national level representing our college.

Feb 2025

SE Hackathon, SPIT - Awarded 'Domain Winners' in AI/ML and were ranked among the Top 12 teams.

Apr 2024

National Hackathon "Logithon" - Finalist in DMCE's Hackathon.

Apr 2024
