Summary

Electronics and Telecommunication Engineering graduate with a strong foundation in **Data Structures, Algorithms, and Full-Stack Web Development**. Experienced in building scalable web applications using modern technologies including **React.js, Node.js, Express.js, and MySQL**. Proficient in **RESTful API design, version control with Git, and responsive UI development**. Passionate about **solving real-world problems, writing clean and efficient code**, and contributing to impactful, **user-focused software solutions**.

Education

Sardar Vallabhai Patel College of Science, Commerce and Arts, Mumbai **Oct. 2020 – May 2022**
Higher Secondary Certificate (HSC) , 12th Grade *Mumbai, India*

Sardar Patel Institute of Technology, Mumbai **Nov. 2022 – Jul 2026**
B.Tech in Electronics and Telecommunication Engineering *Mumbai, India*

Technical Skills

Languages/Database: : C , C++ , JAVA , MYSQL

Web Technologies: HTML, CSS, Javascript, React.js, Tailwind CSS, Node.js(Express)

Projects

Online Clothing Store | *React, Tailwind CSS, Node.js (Express), MySQL, Razorpay* **www.clothque.shop**

- a full-stack **e-commerce platform** with **100+ products**, secure authentication, and complete order management.
- Designed a fully responsive UI using **React** and **Tailwind CSS** for fast load times across devices.
- Implemented **real-time wishlist** and cart features with **< 2s response time** and live item updates.
- Integrated **Razorpay gateway** for secure, seamless checkout and payment processing.
- Ensured **clean architecture** with full validation and error handling, resulting in zero critical post-deployment issues.

URL Shortener | *React, Tailwind CSS, Node.js (Express), MySQL* **www.shortttt.in**

- Built a full-stack URL shortener with time-based expiration and automated cleanup for efficient database management.
- Developed a responsive frontend using **React** and **Tailwind CSS**, tested with 500+ URLs for smooth user experience.
- Implemented backend logic using Express.js to handle URL shortening and 24-hour expiration.
- Stored URL mappings and expiry data in MySQL using optimized queries for fast access.
- Applied 100% input validation to block invalid or duplicate URLs and trigger scheduled cleanup.
- Created RESTful APIs with clear routing, error handling, and maintainable backend structure.

Portable ECG Monitoring System | *Final Year Project* **SPIT, Mumbai**

- Built a standalone, battery-powered ECG device using **ESP32** and **AD8232** for real-time heart signal acquisition, **R-peak detection**, and **BPM calculation**.
- Programmed in Arduino IDE to process ECG signals and display waveforms and heart rate on a 3.5" TFT LCD.
- Integrated a machine learning model on-device using TensorFlow Lite Micro to **detect cardiac anomalies like arrhythmia and bradycardia**.
- Designed for **low power, offline use**, and portability, targeting personal and **rural healthcare applications**.

Hackathons & Competitions

- Participated in a 24-hour Hackathon at TSEC, collaborating in a team of 4 to design and prototype a tech solution, enhancing problem-solving, communication, and rapid development skills.
- RUBIX'25 – CSI TSEC Hackathon Participated in "RUBIX'25", a competitive 24-hour coding and innovation event. Engaged in rapid development cycles and contributed to ideating solutions targeting real-world problems, gaining practical experience in collaborative software development.

Hobbies

- Exploring financial markets with interest in stock trends, economic cycles, and long-term investing
- Trekking and exploring nature trails
