EDUCATION

Sardar Patel Institute of Technology(SPIT) <i>Bachelor of Technology, Computer Engineering</i>	Andheri, Mumbai, India Oct. 2022– May 2026
PACE Junior Science College <i>High School: Science(PCM) stream</i>	Nerul, Navi Mumbai Aug. 2020 – Oct 2022
Atomic Energy Central School 4(AECS 4) <i>Elementary and Middle school</i>	Anushaktinagar, Mumbai till Aug. 2020

EXPERIENCE

AI Intern <i>Plasmid Industries</i>	June 2024 – July 2024 [Remote]
- Generated a minor report on K Means clustering and implemented it on a dataset with given scores and percentiles(for k=3). - Created a project of spam news detection using NLP and Classification algorithms. - Used nltk and regex(re) library to preprocess the text entered by the user to lowercase it, remove stopwords and extract features based on corpus list. - From the extracted features, Naïve Bayes Classifier was used to classify the text entered as real news or fake news. - Achieved 75 percent accuracy on the test datasets.	

PROJECTS

Spam News Detection <i>Pandas, nltk, regex, scikit-learn, numpy</i>	June 2024 – July 2024
- This project was aimed to take news text as input and classify this as real and fake news. - It was based on NLP and Classification algorithms - Used nltk and regex(re) library to preprocess the text entered by the user to lowercase it, remove stopwords and extract features based on corpus list. - Achieved 75 percent accuracy on the test datasets.	
K Means Clustering[Minor Report] <i>pandas, matplotlib, scikit-learn, numpy</i>	June 2024 – July 2024
- Created a detailed report on K Means Clustering. - Used it on a dataset with attributes as Names, Scores, Percentile - Displayed K Means Clusters(where k=3)	
Sentiment Analysis <i>Pandas, numpy, scikit-learn, nltk, regex(re)</i>	June 2024 – July 2024
- Our aim was to take news text as input and classify this as real and fake news. - It was based on NLP and Classification algorithms - Used nltk and regex(re) library to preprocess the text entered by the user to lowercase it, remove stopwords and extract features based on corpus list. - Found 80 percent accuracy on the test datasets.	
Smart Attendance Tracker <i>os, numpy, pytorch, OpenCV, PIL, facenet.pytorch, tensorflow, matplotlib</i>	April 2025 – Ongoing
- Only the analysis part of the project is completed by me. - This part was focused on taking sample images and predicting its identity. Open-CV library was used to preprocess the training image and was linked to its identity. - Applied ResNet 50 to extract necessary features from the testing image which was processed using PIL library and its identity was predicted using FaceNet. Bot ResNet50 and FaceNet are DeepCNN Neural Network. 6 images were tested with accuracies of 0.84, 0.80, 0.79, 0.87,0.75,0.68.	
Sales Prediction <i>os, numpy, matplotlib, scikit-learn, pandas</i>	May2025 – June 2025
This project aims to predict sales using the attributes: Location, Promotion, Holiday week, Avg temperature, Foot Traffic, Advertising Spend	

- Encoded the categorical data and applied feature scaling to preprocess the data.
- Used the following regression algorithms: Multiple Linear Regression, Support Vector Regression(SVR), Decision Tree Regression and Random Forest Regression. Each of these algorithms were separately applied and their Mean Squared Error(MSE), Root Mean Square Error(RMSE), Mean Absolute Error(MAE), R2-Score were calculated on both training and testing predictions.
- Displayed Bar graph to show the comparisons.

Graphs Data Structure(as Tree) | *Python, Java, Go*

May 2025 – June 2025

- This project is aimed to display graphs as trees where each node contains address of the list of all the nodes connected to it.
- Time and Space Complexity is expected to be $O(n)$.
- Implemented it in Python, Java and Go.

TECHNICAL SKILLS

Languages: Java, Python, C, Go, SQL , HTML/CSS

Frameworks: Tensorflow, PyTorch, Scikit-Learn

Developer Tools: Git, VS Code, Jupyter Notebooks, Power Bi

Libraries: pandas, NumPy, Matplotlib, Seaborn

CERTIFICATIONS

Udemy: Golang | *Go programming, go-colly library*

October 2024 – November 2024

- This course offered me the coding platform for Golang.
- It introduced me the concept of go-colly library for web scraping

AI academia: AI chatbot workshop | *pandas, matplotlib, scikit-learn, numpy, re, nltk* March 2025 – April 2025

- This course introduced me to the detailed theory of Machine Learning and Deep Learning.
- Learnt both supervised, unsupervised, clustering and reinforcement learning.
- Learnt how to build a simple AI chatbot using nltk and re

Udemy: Data Structures and Algorithms | *Linear Data Structures, Non Linear Data Structures, Sorting, Searching, BFS, DFS*

- This course polished my basic skills in data structures and algorithms.
- Using the concepts of this course, i implemented graph data structures in the form of tree which reduced the space complexity of graph implemented in adjacency matrix and adjacency list and made full use of BFS traversal,

Udemy: Machine Learning | *pandas, numpy, scikit-learn, apyori, tensorflow, keras,nltk,regex* May 2025 – June 2025

- This course polished my basic skills in Machine Learning.
- Learnt theory behind the Supervised, Unsupervised and Reinforcement Learning, and learnt implementing them in python libraries(pandas,numpy,scikit-learn,apyori,xgboost)
- Got introduced to Deep Learning algorithms ANN and CNN and implemented them using Python libraries(tensorflow,keras)
- Learnt NLP and implemented it using python libraries(nltk,regex)
