Education

Sardar Patel Institute of Technology

Bachelor of Technology in Computer Engineering

November 2022 – July 2026

Mumbai, Maharashtra

Objective

A highly motivated tech enthusiast with a strong academic foundation in computer engineering, aspiring to leverage the latest technological advancements to drive success in a dynamic organization. Committed to continuous learning and innovation, and seeking to contribute effectively while growing professionally.

Technical Skills

Languages: Python, Java, MySQL

Technologies/Frameworks: Flask, TensorFlow, scikit-learn

Developer Tools: VS Code, Eclipse, IntelliJ IDEA, Jupyter Notebook, Git

Soft Skills: Teamwork, Problem solving, Critical thinking

Experience

Defence Research and Development Organisation (DRDO) | Certificate

June 2024 – July 2024

Machine Learning Intern

New Delhi

- Applied adversarial machine learning methods using the Adversarial Robustness Toolbox (ART) to enhance model robustness and security.
- Conducted evasion attacks on machine learning models, identifying critical vulnerabilities.
- Innovated and implemented advanced strategies to prevent evasion attacks, significantly improving model resilience with the help of ART.
- Enhanced model robustness by applying adversarial machine learning techniques using ART, addressing threats such as poisoning, model inversion, and membership inference. Developed and implemented effective defense mechanisms to significantly improve model resilience.

Projects

ShopSense-ML: Smart Retail & Forecasting Toolkit | Python, Flask, React, MySQL |

- Developed a full-stack ShopSense-ML retail platform using Flask (backend), React (frontend), and MySQL, featuring secure Auth0-based login and registration for store-specific access.
- Enabled store owners and staff to manage inventory, update stock levels, and monitor key metrics through an interactive dashboard with multi-store support, allowing management of multiple stores under a single account.
- Implemented automated notifications (email/SMS) for low stock and upcoming batch expirations using Twilio, ensuring timely inventory actions.
- Integrated XGBoost for accurate sales forecasting and K-Means Clustering for customer segmentation, enabling data-driven dynamic pricing and maximizing profitability.

CaptionAssist: Real-Time Vision for the Visually Impaired | Python, React Native |

- Used VGG16 and a CNN-LSTM model on the Flickr8k dataset to generate descriptive captions from visual input.
- Built a mobile app delivering real-time audible descriptions and ViLT-powered visual Q&A, allowing users to ask questions about their surroundings.
- Enabled storage of images and captions locally or on the user's Google Drive for easy access and sharing.

Automated Stock Price Forecasting System | Python, Beautiful Soup, Streamlit |

- Implemented a Python-based pipeline that scrapes daily stock prices, updates an LSTM model, and generates forecasts with minimal manual intervention.
- Benchmarked model against ARIMA and moving average methods; achieved 15% lower MAE, confirming superior prediction accuracy.
- Delivered an interactive Streamlit dashboard enabling real-time trend exploration and model performance visualization.

Achievements

LeetCode: Completed 700+ coding problems, including 400+ of Medium difficulty, to build and strengthen problem-solving skills.

Hackathon: Placed among the Top 10 teams (out of 200+) at Hackverse 2025, where we contributed to an innovative project built under tight deadlines.
