

Riva Rodrigues

Computer Engineering Student

rodriguesriva1130@gmail.com | linkedin.com/in/riva-rodrigues/ | github.com/Riva-Rodrigues

EDUCATION

Bhartiya Vidya Bhavan's Sardar Patel Institute of Technology

2022 – Present

B.Tech in Computer Engineering

CGPA: 8.9 / 10

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Database Management Systems

WORK EXPERIENCE

Machine Learning Intern

June 2024 – August 2024

Aim4u Software Solutions

- Conducted research and developed a machine learning model using YOLOv5 and attention modules to detect micronutrient deficiencies via facial markers, achieving 86.40% accuracy.
- Built a diagnostic tool mapping up to 9 facial features to potential deficiencies and skin conditions, offering a practical solution for proactive health monitoring by individuals and healthcare providers.
- Contributed to a granted German Utility Patent for the innovation in detecting micronutrient deficiencies through facial analysis.

PROJECTS

Gyaansarthi.ai – Educational Platform | Node.js, MongoDB, Python, React, ZEGOCLOUD | [Demo](#) | [GitHub](#)

- Secured **2nd Runner Up** position at **UBS India Campus Hackathon** for building an impactful AI-powered educational platform.
- Built a full-stack platform enabling real-time video conferencing, interactive whiteboards, and session recording, with role-based dashboards for students, volunteers, and schools.
- Implemented a matching system using collaborative filtering to pair students with suitable volunteer teachers based on subject requirements, availability, and teaching style.
- Developed a content processing pipeline using speech-to-text and NLP to generate transcripts and structured study notes from recorded sessions; integrated a Telegram bot for real-time alerts and platform access.

Witty AI | Express.js, Python, React, Google Workspace APIs, Notion API | [Demo](#) | [GitHub](#)

- Developed an AI-powered document and task management system with multi-agent coordination to streamline business operations at startup firms.
- Built AI-driven automation features for scheduling, task tracking, document management, meeting summarization, and follow-up reminders, improving workflow efficiency.
- Integrated OpenAI, Notion API, Google Calendar, and Gmail for intelligent automation, ensuring seamless user experience.

LegalAlly | Python, PostgreSQL, React | [Demo](#) | [GitHub](#)

- Developed an AI-powered legal document platform with smart form filling, document version control, and export features.
- Integrated InLegalBERT for statute identification, classification and judgement prediction, achieving 95% accuracy and improving compliance and legal research.
- Built a personalized legal news hub with tag-based filtering and real-time updates on relevant legal and regulatory developments.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C

Web Development: Node.js, Express.js, Flask, Streamlit

Databases: MongoDB, MySQL, PostgreSQL

AIML: TensorFlow, Scikit-learn, OpenCV, Pandas, NumPy

Tools: Git/Github, Postman, Figma

ACHIEVEMENTS

2nd Runner Up: UBS India Campus Hackathon — Developed *GyanSarthi.ai*, a platform to bridge the education gap by connecting students with mentors and learning resources, focused on promoting inclusive learning.

1st Runner Up: HackNiche 3.0 (ML Domain), HACKANOVA 4.0, Bit & Build International Hackathon — Built ML-driven solutions across domains including legal AI, e-commerce intelligence, and restaurant analytics.

Domain Winner (AI for HealthTech): Aeravat Hackathon — Developed an AI tool using OCR and NLP to detect drug interactions, allergy risks, and dosage errors from medical documents.
