Education

Sardar Patel Institute of Technology <i>Bachelor of Technology in Computer Engineering - CGPA:8.1</i>	Nov. 2022 – Present <i>Andheri, Mumbai</i>
PACE Junior College <i>Maharashtra State Board of Secondary and Higher Secondary Education - Percentage: 82%</i>	Jul. 2020 – Jul. 2022 <i>Andheri, Mumbai</i>
R.N. Podar School <i>Central Board of Secondary Education - Percentage: 96.8%</i>	Jul. 2007 – Jul. 2020 <i>Santacruz, Mumbai</i>

Projects

Handwritten Answer Key Evaluation <i>TrOCR, Mistral-7B, LLaVa</i>	Mar. 2025
- Constructed a custom dataset of 100 handwriting samples from diverse sources for training the OCR model, boosting character recognition accuracy on previously unseen handwriting styles. - Aligned theoretical content with corresponding diagrammatic elements to validate conceptual consistency and enhance grading precision. - Enabled holistic assessment by integrating visual reasoning with textual analysis, reducing bias and improving scalability in automated evaluation systems.	
Prediction of COVID-19 Cases <i>FBProphet, ARIMA</i>	Apr. 2022
- Developed time-series forecasting models to analyze COVID-19 case trends from 2020 to 2021 using historical data. - Optimized FBProphet using domain-relevant hyperparameters—fine-tuned changepoint prior scale and seasonality mode to improve adaptability across volatile COVID-19 case fluctuations. - Evaluated ARIMA and FBProphet time-series models for forecasting COVID-19 case trends, demonstrating that FBProphet excelled in handling the volatility, and ARIMA was suitable for stationary data trends. - Achieved a MAPE of 15% with FBProphet on a 15-day prediction horizon, demonstrating strong model reliability.	
Video Game Data Analysis <i>Power BI, PySpark</i>	Jun. 2024
- Ingested and pre-processed over 200,000 game records using PySpark, aggregating structured metadata from multiple sources to support scalable cross-platform analysis. - Integrated the refined dataset into Power BI to build 6+ interactive dashboards, enabling exploration of gameplay trends over 5 years of data. - Uncovered key gameplay and industry patterns—such as Steam’s 91.73% platform dominance, exponential rise in playcounts during 2020–2022, and genre diversity led by developers like Nintendo—providing actionable insights into user engagement, market positioning, and development trends.	

Technologies

Programming Languages:

C, MySQL, Python, JavaScript, R

Technologies/Tools:

MySQL, MS Office, Canva, Figma, Tableau, Power BI, Docker, Git, Pandas, NumPy, Hadoop, React.js, Three.js, TailwindCSS

Relevant Coursework:

Big Data Analysis and Visualization, Natural Language Processing, Cyber Security and Digital Forensics

Achievements

- Scored 92 percentile in GATE 2025
