SUMMARY

A junior computer science student currently interning at **Tata Institute of Fundamental Research (TIFR -NCRA)** in a funded machine learning and astrophysics project focused on inference time model optimization in collaboration with a team from Oxford .

EDUCATION

Bharatiya Vidya Bhavan's Sardar Patel Institute of Technology, Mumbai, India

B.E. Computer Engineering

Current SGPA : 9.05/10

2022-2026

Technologies : C++, Python, SQL, Tensorflow, Pandas, HTML, CSS

Skills: Machine learning, Data analysis, Portfolio Management

EXPERIENCE

Machine learning intern, Deepcytes Cyberlabs

Jul 2024 - Aug 2024

- Engineered various deepfake testing videos for model evaluation using first order models .
- Increased accuracy of deepfake detection models using custom layers by 6% on average .
- Designed a production ready highly optimised free of cost telebomber using selenium and python .

PROJECTS

Distributed Car Rental System : Developed a distributed car rental system from the ground up in Python

Apache Zookeeper, Kafka, Socket,Streamlit, Python

- Built a car rental system in python, able to handle multiple concurrent users, via load balancers and handle replication, concurrency and atomicity, election issues.
- Improved scalability by 300 % using zookeeper by replication of kafka nodes, providing flexible scaling.
- Created a round robin load balancer and managed multiple servers using low latency pipelines for leader election,order queuing and heartbeat, achieving real time performance .
- Implemented a master slave database architecture to maintain strict consistency while providing efficient database reads.

Backtester.py : Low latency High volume backtester

Pandas, Numpy, Vectorisation, Multiprocessing

- A real time optimised backtester built from scratch and used by a Mumbai based prop trading firm.
- Achieved a speedup of more than 300 % using vectorisation and multiprocessing.
- Optimized for **low latency second by second tick data** with support for strategy parallelism.
- Built a scalable architecture leveraging **Pandas, NumPy**, and **shared-memory multiprocessing**, enabling backtests on millions of rows in under seconds.
- Offered a paid quantitative developer fall internship at the same prop trading fund based on the project.

ACHIEVEMENTS

- Finalist among 1400+ coders in Code Uncode 2025.
- Ranked in top 2% out of 40,000 top programmers all over India in Ilcpc 2025 india prelims .
- Awarded a CBSE certificate of excellence for being in top 0.1% performers all over india .in matriculation board exams
- Ranked 895 out of 2,82,000 candidates in MHT-CET PCM 2022 .

CERTIFICATIONS AND VOLUNTEERING

- Optimize TensorFlow Models For Deployment with TensorRT
 - Algorithmic Trading and Portfolio Management in R
 - Generative AI fundamentals
 - Taught underprivileged students at ABHYUDAYA-SPIJMR high school maths and physics .
- Coursera
-NPTEL IIT KGP
-Vizuara
