EDUCATION

Bachelor of Technology, Computer Engineering
Sardar Patel Institute of Technology, Mumbai

November 2022 - Present
CGPA 8.88

WORK EXPERIENCE

Machine Learning Intern | Aim4u Software Solutions

June 2024 – August 2024

- Researched nutrient deficiencies to identify key visual skin markers, contributing to the development of a robust multiclass detection system.
- Curated and annotated a comprehensive dataset; trained YOLOv5 models with attention mechanisms to improve detection accuracy and generalization.
- Contributed to patent the work, resulting in a granted German Utility Patent for innovation in ‘A system for detecting micronutrient deficiencies using facial markings’.

TECHNICAL SKILLS

Languages	Python, C, Java, SQL
Web Development	HTML5, CSS, JavaScript (React.js, Node.js, Express.js), MongoDB, Flask
Machine Learning	TensorFlow, OpenCV, NumPy, Matplotlib, Pandas, Streamlit, PyTorch
Tools	Git, GitHub, Postman, Netlify, Vercel, Power BI

PROJECTS

FlowAI : AI-Powered Platform for Intelligent Communication and Workflow Enhancement | React, Flask, FastAPI, ZegoCloud, PostgreSQL | [Demo](#) [Link](#)

- Developed a multimodal AI chatbot with voice-to-text conversion, multilingual support, and media analysis (photos, videos, and documents), automating workflows and meetings by generating project plans, assigning tasks, and integrating with Notion & Google Calendar.
- Implemented BERT-based email prioritization to analyze sentiment, extract tasks, and automate Google Suite actions like sending emails and uploading files.
- Built a voice-controlled desktop extension for executing commands, editing files, and seamlessly switching between applications.

LegalAI : AI-Powered Legal Document Management System | React, Flask, PostgreSQL | [Link](#)

- Created a robust legal document management platform with upload, retrieval, and editing features, integrated with a Gemini API-powered chatbot for real-time user queries.
- Enhanced text extraction accuracy to 98% using OCR for PDFs and images, aiding legal professionals in document analysis.
- Implemented InLegalBERT-powered statute identification and classification, achieving over 95% accuracy in identifying relevant legal sections.

Restaurant Insights and Menu Enhancement Platform | Flask, Streamlit, React | [Demo](#) [Link](#)

- Developed a data-driven platform to analyze menu items, optimize restaurant locations, and forecast trends, assisting decision-making for restaurant owners .
- Implemented OCR extraction for menu analysis to suggest item improvements and pricing.
- Integrated SARIMAX-based sales forecasting, sales dashboards, and sentiment analysis from Zomato reviews to optimize operations and customer engagement.
- Achieved 92% forecasting accuracy for restaurant trend predictions, supporting strategic planning for future business impacts.

ACHIEVEMENTS

2nd Place - Bit & Build International Hackathon : Built a smart solution for restaurant owners with features like sales forecasting, sentiment analysis, location mapping, weather-based predictions, and inventory management.

2nd Place - Hackanova 4.0 National Level Hackathon : Developed a multimodal AI chatbot with workflow automation, BERT-based email prioritization, Google Suite integration, and a voice-controlled desktop extension.

2nd Place - Hackniche 3.0 Hackathon (ML Domain) : Developed an AI-powered e-commerce platform, ShopMart that enhances user shopping with smart recommendations, visual search, and virtual try-ons while empowering sellers and admins with analytics, forecasting, and management tools.
