Education

Sardar Patel Institute of Technology, Mumbai

May 2026

- Bachelor of Technology in Computer Engineering
- **Relevant Courses:** Data Structures & Algorithms | Operating Systems | Computer Networks | DBMS | OOPs

Technical Skills

Languages: Java, SQL, Python, C, C++, HTML, CSS, JavaScript

Libraries/Frameworks: ReactJS, NextJS, NodeJS, ExpressJS, Flask

Databases: MongoDB, MySQL, PostgreSQL, Firebase

Experience

Triblet SportsTech – Software Developer + UI/UX Intern

April 2025 – May 2025

- Developed an admin dashboard feature for payment entry using ReactJS and TypeScript, with sidebar navigation and Firebase integration for real-time data storage and retrieval
- Built dynamic tournament bracket visualization system using a React-based library, enabling real-time tournament progression tracking and interactive bracket management
- Designed and styled responsive UI components aligned with the dark theme, ensuring clean layout structure and consistent integration within the dashboard
- Independently created Figma designs for turf booking (desktop), upcoming match details (mobile), and tournament viewing pages (mobile), ensuring consistency with Triblet's design language and visual theme

Projects

Chat Application

GitHub

- Built a real-time chat application using the MERN stack with socket-based communication and instant message delivery
- Implemented JWT-based authentication and route protection to ensure secure user access and messaging sessions
- Enabled persistent chat history with MongoDB, allowing users to view past conversations across sessions
- Designed a responsive interface for user login, selection, and messaging

SmartStay – AI-Powered Hotel Booking & Travel Planner

GitHub

- Developed a third-party hotel booking platform that aggregates hotel prices from multiple sources using web scraping and displays the lowest available rates, allowing users to book cost-effective stays.
- Implemented NLP-based sentiment analysis to summarize hotel reviews, providing users with concise insights into customer feedback for better decision-making.
- Designed an AI-driven trip planner that generates tailored travel plans based on user preferences and suggests hotels from the platform's listings for seamless trip coordination.
- Built a responsive React.js frontend (with Shadcn UI), a Flask backend, and a MySQL database to ensure smooth booking, efficient data handling, and secure user transactions.

Centralized Medical Data Retrieval System Using Aadhaar Authentication

GitHub

- Designed and developed a full-stack web application using React.js, Node.js, Express.js, and MySQL, enabling secure retrieval of patient medical records through Aadhaar-based authentication.
- Implemented Firebase authentication for secure and seamless access, with separate interfaces for patients and healthcare providers.
- Developed a centralized server to handle a dataset of 10,000 patients, ensuring scalability, data privacy, and interoperability between healthcare systems.
