June 2020 - Feb 2022

PROJECTS

DocuMind – Academic PDF Analysis Platform | Python, Flask, Streamlit, Gemini API, NLP, NetworkX

July 2025

- Developed a full-stack system to analyze academic PDFs via summarization, citation extraction, topic modeling, and chat-based document querying.
- Built citation analysis pipeline using regex + NLP for marker detection, context extraction, and citation network graphing with NetworkX.
- Integrated Google Gemini LLMs (1.5 Pro, Flash, Vision) for summarization, context-aware chat, and topic extraction using structured prompts.
- Implemented hybrid RAG framework combining BM25 and vector-based retrieval for semantically grounded document chat.
- Achieved 92% precision in citation identification and ROUGE-1 score of 0.42 in summary generation across 50+ diverse research papers.

InventoSync | Flask, Firebase, React, AI, Prophet Model

March 2025

- Developed an AI-powered inventory management system for tracking, forecasting, and optimizing inventory.
- Designed a real-time dashboard providing graphical analysis, alerts for stock levels, and demand forecasting.
- Achieved 91% demand prediction accuracy and reduced overstock by 23% via automated restocking.
- Integrated a chatbot for real-time B2B negotiations and streamlined supplier transactions.
- Used OpenStreetMap API for logistics optimization across 3 warehouse zones.
- Implemented QR-based product tracking and WhatsApp/Telegram alert system for low stock.

PokeFlow – Intelligent Workflow Automation Tool | React, Flask, OpenAI, LangChain

January 2025

- Built a collaborative platform that converted emails and meeting notes into structured task flows.
- Integrated Google Meet, Gmail, LinkedIn APIs to unify communication and task management.
- Reduced manual task logging by 35% using OpenAI + LangChain for auto-summarization.
- Enabled role-based access and secure collaboration across dynamic workspaces.

AI-Driven Digital Mapping System | YOLOv8, SAM, LLMs, HERE API

May 2025

- Developed semantic maps from street and satellite data with object detection (YOLOv8) and segmentation (SAM).
- Processed 1,200+ points of interest and tagged crowd zones with LLM-generated labels.
- Improved geotagging accuracy by 22% using automated anomaly correction logic.
- Rendered interactive maps with HERE Vector API for real-time urban insights.

TECHNICAL SKILLS

Languages: Python, Java

Frameworks: Flask, FastAPI, Pandas, NumPy, Scikit-learn

Tools: Jupyter, Streamlit, Git, Docker, Trello, VS Code

Visualization: Matplotlib, Seaborn, Dashboard Design

Automation & AI: OpenAI LLMs, LangChain, Workflow Automation, API Integration
