OBJECTIVE

Enthusiastic and motivated computer science graduate with a solid academic foundation, eager to apply technical expertise to real-world projects. Passionate about problem-solving, teamwork, and contributing to impactful solutions. Committed to continuous learning and growth as a software engineer while driving success and innovation in the technology field.

EDUCATION

Bachelor of Technology in Computer Science and Engineering (Artificial Intelligence and Machine Learning) (CGPA: 8.60/10)

Bharatiya Vidya Bhavan's Sardar Patel Institute of Technology (SPIT)

Expected 2026

HSC - Maharashtra State Board (84 %)

Prakash College of Commerce and Science

2020 – 2022

SSC - Central Board of Secondary Education (96.4 %)

M.K.V.V.I.V

2008 – 2020

SKILLS

Technical Languages: Proficient in C++, C. Have strong fundamentals in design and analysis of algorithms.

Web-Development: HTML, CSS, JavaScript, ReactJs, Node.js, Express, EJS and extensive knowledge in databases, with hands on experience in MongoDB and MySQL

Machine Learning: Strong grip in Python and its libraries NumPy and Pandas, with hands on experience in Data Analysis, Feature Engineering, Model Training and Evaluation

Soft Skills: Communication, Problem-solving, Creativity, Time Management, Leadership

Version Control: Git, GitHub

Co-Curricular

Marketing Head

Dec 2023 – Dec 2024

TEDx SPIT

Recruit, train, and supervise committee members for marketing tasks, ensuring smooth execution of initiatives. Develop comprehensive plans, identify target audiences, set objectives, and manage the budget effectively, seeking cost-saving opportunities while maintaining high-quality marketing.

PROJECTS

SharePlates An innovative online platform tackling food waste and insecurity by connecting restaurants with surplus food to nearby NGOs and food banks. Our mission is to foster collaboration between food establishments and charities, ensuring excess food reaches those in need instead of going to waste.

(March, 2024)

Guide-Allocation A full-stack website for college projects, where students choose project guides based on alignment with their project idea. Streamlining guide allocation, it matches students with mentors and offers evaluation tools after project phases. (May 2024)

Skin Cancer Detection A machine learning project utilizing convolutional neural networks (CNNs) to accurately detect and classify the type of skin cancer in patients. (On going)
