## SUMMARY

Enthusiastic engineering graduate specializing in AI and ML with a strong foundation in full-stack development and automation. Skilled in Java, Python, and cloud-native tools like Docker and Kubernetes, with hands-on experience in building scalable systems and intelligent solutions through academic and industry internships. Passionate about technology, problem-solving, and continuous learning, especially in the financial area. Currently learning JavaScript, PostgreSQL, and MongoDB, with a keen interest in cybersecurity and real-time secure applications. Recently explored Large Language Models (LLMs) and their applications in intelligent automation, enhancing expertise in building adaptive, AI-driven solutions. Eager to contribute to innovative software solutions for high-impact clients in fintech, telecom, and e-commerce sectors.

## EDUCATION

|                                                                                                                                                                                 |                                                                                    |

## PROJECTS

- Kubernetes-based Microservice Testing Infrastructure**  
*Docker, Kubernetes, Postman, Python (unittest), Jenkins, REST APIs (Ongoing)*  
June 2025 - Present  
Individual Project
  - Developed automated test scripts to validate containerized microservices deployed on Kubernetes clusters.
  - Employed Postman for API testing and Python *unittest* for backend logic validation.
  - Integrated Jenkins to automate test execution on staging environments post-deployment and also enhanced deployment reliability by catching config/environment-specific failures early.
- AI-Powered Threat Detection for Secure Finance Systems (SureLock)**  
*Python, PyTorch, Scikit-Learn, React.js, REST APIs, Machine Learning Models (Autoencoder, Isolation Forest, K-Means) (Ongoing)*  
Feb 2025 – Present  
Group Project
  - Implemented a hybrid ML/DL anomaly detection framework for real-time fraud detection in banking by combining with dynamic weighted voting for accurate classification.
  - Integrated a secure interface with 2FA, automated alerts, and dashboards to monitor fraud risks and system performance.
- Automated Test Framework for Web Applications**  
*Python, Selenium, Robot Framework, Pytest, GitHub Actions, HTML Reports*  
Apr 2025 - Jul 2025  
Group Project
  - Designed a modular automated testing framework using Selenium and Robot Framework with robust exception handling and detailed test result logging.
  - Developed test suites for core workflows and integrated them into a CI pipeline via GitHub Actions for automated regression testing.
- Geo-tagging and Tracking for Detected Vehicles using UAV: SHIV-NATARAJ Dataset**  
*Python, OpenCV, YOLOv11n-OBb, ByteTrack, Homography, Google Earth (Completed)*  
Feb 2025 - Apr 2025  
Individual Project
  - Processed unstructured drone video data and built a vision-based system to detect, track, and geo-register vehicles in drone footage using YOLOv11n-OBb and ByteTrack.
  - Applied homography transformation to convert pixel coordinates into lat-long tags, enabling accurate overlays on Google Earth.
  - Enhanced multi-frame tracking stability, reducing ID switches in dense traffic scenarios for intelligent transport systems.
- EcoTrack– Personal Carbon Footprint Tracker**  
*MERN Stack, Tailwind CSS, Recharts, JWT, MongoDB Atlas, Render (Completed)*  
Nov. 2024 - Mar. 2025  
Group Project
  - Developed a full-stack MERN web application to track daily habits and estimate carbon emissions using public datasets, featuring JWT-based user authentication and dynamic Recharts analytics.
  - Designed a responsive UI with Tailwind CSS on Render and MongoDB Atlas, ensuring secure, scalable, and real-time performance tracking.

## TECHNICAL SKILLS

**Languages:** Java, Python, C++, JavaScript, HTML/CSS, XML  
**Frameworks/Technologies:** Spring Boot, Hibernate, JDBC, React, Angular, Node.js, Django, Flask, REST APIs  
**Web & UI:** HTML, CSS, JavaScript, Tailwind CSS, Web Standards  
**Databases & Developer Tools:** MySQL, MongoDB, MongoDB Atlas, Git, Docker, Kubernetes, AWS(EC2, S3-basic), IntelliJ, PyCharm, VS Code, Visual Studio, GCP  
**Concepts & Algorithms:** Object-Oriented Design, Multithreading, Design Patterns, DSA (Java), SDLC, Software Debugging  
**Courses:** Data structures & Algorithms (Java), Software Engineering, Blockchain Technology, User Experience Design, Database Management System, Finance in Engineering, Communication Skills, Computer Communications and Networking, Machine Learning, Distributed Computing, Fundamentals of AI.

## EXTRACURRICULAR

- Head of Public Relations, IEEE SPIT**  
Jul 2023 – May 2024
- Head of Creatives, IEEE Computer Society, SPIT**  
Jul 2023 – May 2024
