Education

Sardar Patel Institute of Technology

B-tech in Computer Science(Artificial Intelligence and Machine Learning)

Nov. 2022 – Present

Mumbai, Maharashtra

Career Objective

GenAI Developer with hands-on experience in developing NLP-based AI applications. Adept at leveraging Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and advanced tools to build innovative and user-friendly AI solutions. Skilled in collaborating on technical projects and integrating real-time data insights to create high-impact, scalable applications.

Technical Skills

Languages: Python , C, C++ , Embedded C

Cutting-Edge Technologies: Docker , Git , GitHub , Transformer , Tensorflow , Pytorch

OpenSource: OpenAI , Gemini , Llama , Groq , PineCone , HuggingChain , LangChain

Developer Tools: VS Code, Pycharm, Anaconda , Replit , Arduino IDE , Colab

Python Frameworks: streamlit , numpy , pandas , turtle , matplotlib , OpenCv, Vpython ,Scikit-Learn, tkinter

Data & Cloud Technologies: MongoDB, Google Cloud, AWS

Projects

SpendWise – Kharcha Simplified | *React, Django, Machine Learning, Pandas, Seaborn, SQLite*  **2025**

- Developed a full-stack finance dashboard using **React** for the frontend and **Django REST API** for the backend, enabling real-time transaction tracking. Implemented user authentication, secure data handling, and dynamic UI components for an optimized user experience.
- Designed and trained unsupervised **ML models (K-Means)** to cluster users by transaction **frequency, amount**, and **temporal patterns**, enabling **personalized behavior profiling** and prediction of high-risk overspending windows.
- Visualized financial analytics via **Seaborn**, offering interactive charts, heatmaps, and budget trend summaries.
- Integrated a **voice assistant** feature using **VAPI**, enabling users to interact with the dashboard through voice commands for hands-free navigation and real-time financial insights.

CyberScan - Cybersecurity Assessment Bot | *RAG, LangChain , Transformer , SecureBert*  **2024**

- Engineered an advanced AI chatbot for cybersecurity assessments, utilizing **SecureBERT** and sentence-transformers alongside **LangChain** integrated with **huggingface** for embedding generation, with **FAISS** as the vector database
- The bot dynamically adapts questioning based on initial responses using retrieval augmented generation, conducting risk analyses. Employed **Sentence Transformers** for semantic embedding of textual data, enabling nuanced understanding and contextual relevance in cybersecurity assessments.
- It incorporates NLP-based infrastructure documentation analysis to identify critical gaps in areas like encryption and access control, while machine learning models deliver **real-time risk scoring** to prioritize vulnerabilities. Upon assessment completion, the bot produces comprehensive, actionable reports with targeted security

EcoChoice | *Flask, Zero-shot-classification , BeautifulSoup ,TensorFlow*  **2024**

- Led data collection using **BeautifulSoup** for web scraping, ensuring the dataset included accurate eco-friendly products
- Implemented zero-shot classification using **Facebook's BART-Large-MNLI** model to automatically categorize eco-friendly products without labeled data, enhancing the scalability and adaptability of the recommendation system.
- Used Gensim's **Word2Vec** embeddings to represent product names and descriptions, capturing semantic relationships.
- Developed a recommendation system using a **Bidirectional RNN** to capture both forward and backward context, enhancing product similarity predictions and enabling more accurate, context-aware recommendations.

Achievements

- Amazon Sambhav National Hackathon, 2024** :Secured a finalist position among over 2,000 teams nationwide
- Smart India Hackathon Finalist** : Ranked among the top 50 teams for an AI-driven traffic automation solution.
- Technovate 2.0 Finalist** : Achieved top 10 for pioneering NLP and language model innovations.
- Airavat Finalist** : Shortlisted among the top 40 teams nationwide, then advanced to the top 10 finalist positions.
- DataHack 2.0** : Recognized for standout innovation and expertise in **GenAI**. among **300+** teams
