Projects and research

HeartSense – ML-based Heart Disease Risk Predictor

Role: Data Analyst & ML Engineer

Technologies: Python, Pandas, scikit-learn, TensorFlow, ReactJS, HTML/CSS

- Designed and implemented a responsive web application to assess heart disease risk using non-invasive patient data such as age, cholesterol levels, and blood pressure.
- Performed data preprocessing with Pandas and trained multiple machine learning models, including Decision Trees and Neural Networks, achieving 87.7% test accuracy.
- Built and deployed a ReactJS frontend to ensure a smooth and intuitive user experience.
- Delivered project milestones within a multi-week sprint cycle while balancing academic workload.
