PROJECTS

WikiToon <i>React, Crew.Ai, ElevenLabs, Flux.1-schnell, Flask, FFMPEG</i>	Mar 2024 – Apr 2024
- Built an end-to-end pipeline that converts Wikipedia articles into comic strips using agentic ai. - Automated character generation and comic panel creation with text-to-image models (Flux.1-schnell) and a custom storyboard layout engine. - Integrated ElevenLabs TTS for AI voice narration compiling the content into a short, engaging video using FFmpeg.	
EduVerse <i>React, MongoDB, Node.js, Express, Flask, Cloudinary, Qdrant, Langchain</i>	Jan 2024 – March 2024
- Developed an intuitive EdTech platform that helps educators create meaningful learning experiences. - Integrated a RAG-based AI agent with Qdrant as vector store to generate personalized course modules and slide decks, making content creation faster and smarter. - Used Marp and Mermaid to turn raw content into clean, structured presentations with diagrams, saving hours of manual effort. Provided Beamer as an Alternative for creating research based PPTs.	
CreatorEase <i>React, Flask, WhisperX, pyannote.audio, MoviePy, FFmpeg, AWS S3</i>	Jan 2025 – Present
- Built an AI-driven podcast editing platform that automates clip extraction, word censoring, and multilingual captioning using WhisperX and pyannote.audio. - Integrated speaker diarization, word-level alignment, and profanity filtering to generate short, high-impact, and safe video segments. - Developed and trained a Random Forest classifier to identify podcast segments with higher user engagement potential.
