Education

B.Tech In Computer Science and Engineering (Data Science)

2022-2026

Sardar Patel Institute of Technology

Mumbai

CGPA: 8.64

Higher Secondary School Certificate

2022

Delhi Public School

Mumbai

Percentage: 91.2%

Experience

Tata Consultancy Services (TCS)

December 2024 – February 2025

Cyber Security Intern

Mumbai, Maharashtra

- Acquired practical experience in enterprise-level **vulnerability management** by discovering and exploiting vulnerabilities such as **SQL Injection, XSS, CSRF, CORS** and broken authentication.
- Conducted **manual testing** to verify results from automated scans, created **custom payloads**, and successfully **evaded security filters** using tools like **Burp Suite** and **SQLMap**.
- Utilized **Kali Linux** built-in tools to perform security assessments and also employed methods such as **Google Dorking** to gather intelligence and assess potential security vulnerabilities.

Skills

Programming Languages: C++, Java, Javascript

Databases: MySQL, Firebase, MongoDB

Web/ App designing: Flutter, Dart, ReactJS, NodeJs, Express, Tailwind

Tools & Platforms: GitHub, VS Code, Postman, Linux (Kali/Ubuntu)

Course work: DBMS, Distributed Computing, Java OOPS

Projects

ZoomIn | *MongoDB, ExpressJS, ReactJS, Socket.io, Framer Motion* | [Live Link](#)

[Github](#)

- Developed an interactive **multiplayer game** website – ZoomIn – where users guess zoomed-in objects using hints and letter blanks, enhancing engagement through **gamified mechanics** (Leaderboard, Points, Timer).
- Implemented real-time multiplayer functionality using Socket.io, allowing players to **create/join rooms** and **play synchronously** with friends, with backend support via Express and MongoDB.
- Crafted a visually appealing UI using React, Tailwind CSS, and Framer Motion, applying **dynamic zoom overlay effects** and smooth animations to elevate the user experience.

YOROKOBI | *NodeJS, MongoDB, Express, ReactJS, Tailwind*

[Github](#)

- Yorokobi is a smart **restaurant queue management platform** offering **real-time status updates**, **remote queue entry**, live wait time tracking and customer feedback through ratings and reviews.
- Implemented secure **user authentication** with **JWT**, ensuring protection against unauthorized access, session hijacking, and token manipulation.
- Connected the **restaurant API** with MongoDB and developed **adaptive queue logic** based on guest arrival times and table durations calculated from party size.
- Integrated a **Leaflet-powered map** using the **Geolocation API** to help users discover nearby restaurants and navigate via Google Maps.

CF EXTENSION | *Python, JavaScript*

[Github](#)

- Engineered a **Codeforces problem recommendation system** utilizing **K-Nearest Neighbors (KNN)** to suggest problems based on user rating (difficulty preference) and solved count (engagement metrics).
- Introduced a **dynamic performance metric** that fine-tunes difficulty levels by analyzing user history and problem-solving patterns.
- Built and deployed a **Flask-based RESTful API**, enabling real-time integration with the frontend for interactive suggestions.

Honors and Awards

- Placed in **top 12 Teams** in SE Hackathon by CSI SPIT.
- 3 Stars** on CodeChef (max rating **1608**)
- Secured Global ranks of **218** and **251** out of 27,685 and 42,193 participants in CodeChef Contests.
