Mumbai

AZ-900 

Summary

Certified Azure Engineer with practical experience gained through self-initiated projects and practical labs. Proficient in **CI/CD pipelines**, automation, and system monitoring, with strong skills in troubleshooting, performance optimization, and maintaining high system availability. Holder of Azure AZ-900 certification, with hands-on expertise in **Kubernetes orchestration**, CI/CD pipelines, containerization, and cloud-native deployments. Developed and deployed **production-grade Kubernetes architectures**, implementing best practices for scalability, security, and resource optimization. Integrated SAST and DAST tools such as SonarQube, Trivy, and OWASP ZAP into CI/CD pipelines, ensuring secure software delivery and regulatory compliance. Eager to contribute as a DevOps Intern by applying my knowledge to build reliable, scalable, and secure operations, leveraging automation, cloud best practices, and infrastructure resilience to support high-availability solutions.

SKILLS

Jenkins CI/CD		AWS EKS		Kubernetes		Observability		Monitoring		Prometheus		Grafana		Azure DevOps		
AWS	Cloud Computing		S3	AWS CloudFront		AWS Lambda		AWS Cloud Watch			AWS VPC			API Gateway		
Linux	Bash/Shell Scripting			Azure VNET		Azure App Service		OSI Model		Docker		GitHub			Dockerfile	
Troubleshooting		Maven		Networking		IAM	TCP/IP, DNS									

EXPERIENCE

Freelance DevOps Engineer

[Vtex.AI](#)

01/2025 – 02/2025 Remote

- Developed & implemented a **production-grade CI/CD pipeline** using **Jenkins** to deploy a Python-based VTEX Diabetes App on **AWS ECS**, reducing manual intervention by **90%**.
- Built **containerized architecture** with **Docker & Amazon ECR**, optimizing image sizes and ensuring seamless deployments.
- Developed **Infrastructure as Code (IaC)** with **Terraform**, automating ECS cluster provisioning, IAM role creation, and CloudWatch log configuration.
- Integrated **CloudWatch Logs & ECS Service Monitoring**, enhancing observability and reducing debugging time by **70%**.
- Reduced **deployment** time by **80%**, improving efficiency for the client's production workloads.

Technical Intern

[LinuxWorld Informatics Pvt](#)

07/2024 – 11/2024 Hybrid (Jaipur), India

Led and managed 5 teams to ensure seamless project delivery and collaboration across multiple projects.

- Developed and deployed a Cloud Service and Docker tool with 15+ incorporated services, ensuring scalability and availability on AWS .
- Deployed and maintained scalable systems using Docker, optimizing resource management.
- Addressed 100+ technical inquiries related to AWS, Network, and Linux, providing expert solutions and support.
- Contributed to 5+ community events, workshops, and seminars, fostering knowledge-sharing and promoting Cloud best practices.

PROJECTS

Azure DevOps Enterprise-Grade CI/CD Automation & Secure Multi-Stage Deployment

[AzureDevOps_Org](#)

- Developed a **multi-branch(development/production) CI/CD pipeline** in **Azure DevOps**, reducing manual effort by **90%** and enabling **zero-downtime deployments**.
- Optimized deployment time by **75%** using **Azure Pipelines, Service Connections** and **YAML** based azure-pipelines.
- Secured **100%** of sensitive **credentials** by integrating **Azure Secret Files** for secrets management across pipelines.
- Improved security compliance by 40% with **SonarQube, Trivy** controlled pipeline execution.
- Reduced integration failures by 60% via automated **artifact versioning** and storage in **Azure Blob & AWS S3**.
- Cut **Docker image** build times by 50%, pushing to **Azure Container Registry (ACR)** and **Docker Hub** for seamless scaling.
- Enforced **100% Quality Gate** adherence, integrating **SAST/DAST** scans, container

Kubernetes Microservices Deployment | Kubernetes, Argocd, AWS EKS,

- Deployed a **5 microservices application** on a Kubernetes cluster, managing user/admin APIs and UI, along with a secured database tier
- Manually authored all Kubernetes **YAML manifests** for fine-grained control over **Deployments, Services, ConfigMaps, Secrets, and Namespaces**.
- Isolated resources across **dedicated namespaces** (user, admin, database) to enhance security, enforce access boundaries, and support multi-tenancy.
- Configured **resource requests & limits**, nodeSelectors, and health checks (**readiness & liveness** probes), ensuring cost-optimized and highly available workloads.
- Executed **ClusterIP** service for the database pod, restricting external access using **Network Policies** for Zero Trust architecture.
- Mounted environment configs via **ConfigMaps** and credentials via **Kubernetes Secrets**, improving operational security and maintainability.

Provisioned **Blue-Green** Deployment of a Spring Boot Banking App using Jenkins CI/CD

[Github](#)

- Developed and executed a zero-downtime deployment pipeline for a Spring Boot banking application using **Blue-Green Deployment** strategy on Kubernetes.
- Streamlined the entire CI/CD process using Jenkins, integrating **SonarQube**, Trivy, Nexus, and Kubernetes for security, compliance, and reliability.
- Reduced deployment downtime to near zero **ZDT** (99.99% availability) by seamlessly switching traffic between Blue (old) and Green (new) versions without user impact.
- Enhanced security and compliance by integrating **SAST** (Static Application Security Testing) with SonarQube, enforcing quality gates, and performing Trivy vulnerability scans on both source code and Docker images.
- Optimized release management by automating versioning, pushing artifacts to **Nexus** Repository, and creating Docker images with secure tagging.

Built an Industry-Grade Monitoring System to Ensure Proactive Infrastructure Observability | Prometheus, Grafana

- Developed and implemented a real-time monitoring stack using **Prometheus**, **Alert manager**, **Node Exporter**, and Blackbox Exporter, ensuring 24/7 observability for both server infrastructure and web applications.
- Configured critical alerting mechanisms, enabling instant detection and resolution of issues like server downtime, high CPU load, memory exhaustion, and website unavailability.
- Implemented custom alert rules with Prometheus Alert manager, sending real-time email notifications via Gmail SMTP, ensuring a **99.99%** automated incident response.
- Enhanced system reliability by proactively monitoring CPU, RAM, disk, and network usage, reducing unplanned outages and optimizing performance.
- Achieved 100% automation in monitoring workflows, eliminating manual intervention for infrastructure health checks and making incident management seamless.

Personal Own Multi Tool Integrated Platform | AWS, Docker, HTML, CSS, Python, Linux, Flask API [Github](#)

- Developed a multi-tool incorporated platform offering 15+ services, including Container-as-a-Service (CaaS), Compute-as-a-Service (CaaS), and Volume-as-a-Service.
- Engineered and applied 20+ APIs to facilitate seamless service interaction and integration.
- Provided Operating System as a Service (SaaS) with support of Redhat Linux Operating System, ensuring flexibility for diverse user needs.
- Implemented OpenAi API with the platform with support of chatgpt4.0 model for chat support.

CERTIFICATIONS

 **Microsoft Certified Azure AZ-900**

Dec 2024

ACHIEVEMENTS

 **SE Hackathon**

Selected in top 5 in the Code-A-Thon organized by SPIT, showcasing exceptional programming skills and creative problem-solving.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science

Sardar Patel Institute of Technology

 2022 - 2026  Andheri West, Mumbai Maharashtra
