EDUCATION

Sardar Patel Institute of Technology, B.Tech in Electronics & Telecommunication Mumbai	2023 – Present
Dr.Babasaheb Ambedkar Technological University, Diploma wing, Lonere,	2020 – 2023
<i>Diploma in Computer Engineering</i>	Percentage: 85.57%
St.Xavier's School, SSC 10th Class Mahad	Percentage: 93.40% 2020

SUMMARY

A highly motivated and skilled Computer & Extc Engineering student with 1.5+ years experience in automation and statistical analysis through academic projects and internships. Proficient in Python, java, and process automation with consistent 80%+ project accuracy. Successfully automated 8 research processes across 3 academic projects, reducing manual work by 40%. Seeking opportunities to apply my technical knowledge.

SKILLS

Programming Languages	Java, Python, C++ .
Statistical Analysis	R, Excel, VBA, MATLAB, Statistical Modeling.
Automation Tools	Process Automation, API Integration, Selenium, Data Extraction.
Database Systems	MySQL, SQLite
Web Technologies	HTML, CSS, JavaScript, JSP, Servlets.

PROJECTS

BuFi – AI-Driven Financial Dashboard Automation & Analytics	Feb 2025
- Built data extraction system using Python and Selenium for financial research processes. - Automated 12 basic compliance calculations reducing manual processing time by 45% - Implemented predictive models with 75% accuracy using statistical analysis techniques.	
TradeGuard – Automated Compliance System Process Automation	Feb 2025
- Self-operating compliance verification for 50+ sample shipments reducing processing time by 40%. - Generated 15 self-regulating compliance reports with statistical analysis achieving 88% validation accuracy - Created monitoring system tracking 50+ regulatory parameters with basic alerting functionality	
Courier Management System Database & Automation	Nov 2024
- Designed academic project managing 100+ sample courier orders using JSP and MySQL database. - Automated tracking for 100+ test shipments reducing manual monitoring effort by 60%. - Created dashboard analyzing 25 operational metrics with basic statistical reporting.	
Financial Data Research Automation System Multi-Language Integration	May 2025
- Developed end-to-end research workflows using Python (pandas, yfinance, openpyxl), Excel VBA, and Selenium—automating stock data collection, analysis, and weekly report generation, cutting manual effort by 70%. - Developed a C++ engine for large-scale volatility and statistical analysis on 10,000+ records, enabling faster, more efficient computations. - Achieved 85% accuracy in stock predictions using R-based time-series models and advanced forecasting techniques.	

Achievements

- CodeAstra Hackathon (RGIT) – 2nd Place**
 - Built Edura, an AI-enabled educational platform with personalized learning, Story Mode, and gamification features.
- Evolve – SaaS Hackathon (MIT WPU, Pune) – 3rd Place**
 - Designed BuFi, an AI-driven financial health dashboard for SMBs with real-time tracking and AI insights
- LogiThon Finalist at IIT Bombay**
 - Selected among top 25 teams nationwide for developing TradeGuard, an AI-enabled trade compliance system

EXPERIENCE

Kopran Research Laborotaries .Ltd, Backend Technologies & Basics of AI/ML	July 2022 – Aug 2022
- Learned server-side scripting using PHP and worked on live medical report generator project. - Worked on face detection and recognition system using AI/ML concepts and computer vision. - Gained hands-on experience with industry workflows and standard operating procedures (SOPs).
