Experience

Technofra

Intern, Frontend Developer, Project Lead

Jan- May 2023

- Worked on developing and enhancing the Website as and its content as per client need increasing the responsiveness of the multiple websites and optimizing the SEO results for more reachability.
- Implemented OTP over SMS and Mail using an API to increase the authentication security and protection from spam.

Projects

Gemhire: Employee Hiring Platform for the Diamond Market

- Developed a web application using React.js and PocketBase for connecting companies and employees in the diamond industry.
- Implemented features such as dynamic dashboards, user authentication, and news integration.
- Integrated web scraping to populate the platform with diamond industry news and generated insights based on the scraped news.

WebSummarizer: Automated Web Page Summarization Platform

- Built a full-stack application using HTML, CSS, JavaScript (frontend) and Flask (backend) for summarizing web pages.
- Implemented search, scraping, and text preprocessing pipelines, with content processed by fine-tuned transformer models for summarization and question answering.
- Deployed scalable FastAPI endpoints in Docker with CAPTCHA bypass, input validation, and rate limiting for robust production use.

Number base conversion and Text Encryption Android App

- Developed an android application for number base conversion in Java and XML.
- Added the text encryption-decryption algorithms like Caesar cipher, Vigenere cipher, Blowfish and DES algorithm.
