Education

Bharatiya Vidya Bhavan's Sardar Patel Institute of Technology, Andheri <i>B.Tech in Computer Science and Engineering (AI-ML)</i>	Aug 2023 - July 2026 <i>CGPA: 7.94</i>
Pillai College of Engineering and Technology (Diploma Section), Rasayani <i>Diploma in Computer Engineering</i>	Jan 2020 - July 2023 <i>Percentage: 90.17</i>

Experience

Software Development Intern <i>DezingLogics Solutions Pvt. Ltd.</i> 	June 2022 – July 2022 <i>Thane, Maharashtra</i>
- Conducted comprehensive automation testing on client websites to ensure functionality, performance, and user experience quality across multiple browsers and devices using JAVA Selenium. - Developed and maintained automated test suites using testing frameworks to validate web application features and identify bugs before production deployment.	

Projects

Cuneiform Glyph Generation & Restoration <i>Diffusion Models, PyTorch, Hugging Face Diffusers, DDPM, UNet</i> 
- Developed an unconditional diffusion model using DDPM architecture to generate synthetic cuneiform script images, contributing to digital preservation of ancient writing systems. Conditional Inpainting Model: Engineered a specialized U-Net architecture with 2-channel input conditioning to restore damaged or incomplete cuneiform characters with archaeologically plausible results. Advanced Training Pipeline: Implemented mixed-precision training with Accelerate framework, featuring dynamic masking strategies (half-character, quarter, random holes) for robust model generalization. Cultural Heritage AI: Created an end-to-end workflow from dataset preprocessing to interactive visualization, enabling researchers to digitally reconstruct fragmented historical texts with 128x128 grayscale image generation.

Vayomitra – AI-Powered Elderly Care Assistant App <i>React Native, Firebase, AI/NLP, Twilio</i> 
- Built a smart mobile app for elderly care that enables health tracking, safety monitoring, and real-time communication with caregivers using AI-driven features. Safety & Routine Care: Implemented fall detection with wearable sensors and Twilio SOS alerts (triggered within seconds), along with a daily scheduler and medication reminders to support healthy routines. Saya – AI Care Assistant: Developed an AI conversational assistant to answer user queries and suggest personalized nutrition plans from a curated database of 1,000+ Indian dishes. Prescription OCR: Used NLP-powered optical character recognition to extract and manage medication information from prescriptions with over 98% accuracy.

FarMart – B2B Farmer & Buyer Portal <i>React.js, Node.js, Express.js, MongoDB</i> 
- Designed and developed a full-stack B2B platform connecting local farmers with bulk buyers to streamline procurement, order processing, and logistics. Real-Time Orders & Delivery Tracking: Enabled instant ordering and automated invoicing with secure Razorpay payments and Porter API for end-to-end delivery updates. AI-Driven Crop Suggestions: Built a machine learning workflow that analyzes soil nutrients to recommend optimal high-yield crops with high prediction accuracy. Live Market & Weather Insights: Integrated official crop price scraping and live weather data APIs for smarter planning and forecasting.

Technical Skills

Languages: Java, Python, SQL
Frameworks & Libraries: Machine Learning, Generative AI, Computer Vision
Developer Tools & Platforms: VS Code, Android Studio, Git, Jupyter Notebook, Google Colab
Databases: MySQL, phpMyAdmin

Achievements

National & International Level Recognitions

- Winner** – Wings Hackathon hosted by Government Engineering College, Aurangabad. 
- 1st Runner-Up** – MEGAHACK 5.0 Hackathon at St. John College of Engineering, Palghar. 
- Winner** – International Concept Art Contest by Kraftron, Inc. (selected from over 10,000 global submissions).
