CAREER SUMMARY

Driven AI Undergraduate with strong foundations in Programming Languages like Python, Data Analytics and Visualization Tools (NumPy, Pandas, Matplotlib). Passionate about building intelligent systems with advanced Machine Learning, Gen AI and LLM Tech Stack. Skilled in problem solving and translating data into impactful solutions, with proven adaptability to thrive in dynamic environments and quickly master tools or technologies. Eager to contribute to the development of next generation applications that blend innovation, scalability and business impact.

EDUCATION

Bachelor in Artificial Intelligence and Machine Learning

Expected - 2026

Sardar Patel Institute of Technology, Mumbai

- Current GPA: 7.62
- Key Academic Learning: Data Structure & Algorithms, Machine Learning, Deep Learning, Natural Language Processing, Generative AI, LLMs

Diploma in Information Technology

2020 - 2023

Government Polytechnic, Mumbai

- Score: 92%
- Built a strong foundation in programming, databases and computer networks, which shaped further interest in AI/ML and advanced computing technologies

Secondary School Certificate

2020

Gokhale Education Society, Mumbai

- Score: 85%

TECHNICAL EXPERTISE

- **Programming & Problem Solving:** Python, Data structure, Algorithms, OOPS.
- **Data Analytics & Visualization:** NumPy, Pandas, Matplotlib, Tableau
- **ML& AI:** Deep Learning and Gen AI (LLM's, Prompt Engineering, AI model fine tuning)
- **Database & Tools:** MySQL for Database Management, Git/GitHub
- Networking Fundamentals

PROJECTS

Risk based Credit Card Fraud Detection

[GitHub](#)

- Built a binary classification model using Logistic Regression to detect fraudulent credit card transactions by addressing data imbalance with under sampling techniques to balance precision and recall.
- Deployed live interactive application enabling real time fraud detection from uploaded transaction files (CSV). Demonstrated strong skills in machine learning, data processing and practical deployment with focus on financial security and fraud detection.

Small Language Model for Text Generation (Tiny Stories)

[GitHub](#)

- Developed transformer-based language model from scratch to generate short stories. Implemented tokenization, embeddings, and custom transformer blocks, trained via gradient descent to minimize loss and produce coherent text, demonstrating strong foundations in LLMS, Deep Learning and Generative AI.

LEADERSHIP / EXTRA CURRICULARS

- Head of Public Relations – ENACTUS Club
- Google Professional UX Design
- Winner – AI Maggedon Hackathon arranged by SMVDU J&K
