Education

Sardar Patel Institute of Technology B.Tech. in Computer Science and Engineering	Sept 2023 – May 2026 8.44/10 CGPA
Government Polytechnic Mumbai, Diploma in Information Technology	Aug 2020 – June 2023 94.33%

Core Subjects

- Data Structures and Algos
- Database Management
- Operating Systems
- Computer Networks
- Distributed Computing
- Machine Learning
- Big Data Analytics
- Software Engineering

Experience

The Fast Way – Web Developer	Jan 2023 – June 2023
• Built and deployed 3+ responsive client-facing websites using React.js, TailwindCSS, and Firestore, hosted via GoDaddy, ensuring cross-device compatibility and business-focused UI design. • Led a team of 4 interns on multiple client projects, coordinating deliverables and improving efficiency by streamlining task division, while independently resolving technical roadblocks through self-learning and peer collaboration.	

Projects

Code Red 3.0 – Browser-Based Multiplayer Game Platform	GitHub Repo
---	-------------

- Built and deployed “Code Red 3.0,” a browser-based 2D game platform with puzzles and mini-games, supporting 100+ concurrent players during a competitive college event, ensuring real-time gameplay continuity through persistent state management and async backend sync.
- Developed a scalable, containerized Admin Dashboard with Redis, Postgres, and Docker for real-time score tracking, level stats, leaderboards, and secure logins, enabling reliable performance and smooth event management.

Tech Stack: ReactJS, Redux, Redis, Postgres, NodeJS/ExpressJS, Docker.

AI-powered Customer Support Chatbot,

- Developed a Generative AI chatbot using Flan-T5 (HuggingFace Transformers) fine-tuned on FAQ datasets and integrated with a RAG pipeline (LangChain) for domain-specific context
- Demonstrated promising results in test evaluations, showing improved query accuracy and potential to streamline portions of customer support.

Tech Stack: Python, HuggingFace Transformers, LangChain, Flask, Docker, Streamlit

EazzyFundzz - MERN-based crowdfunding platform,	Github Repo
--	-------------

- Developed a full-stack crowdfunding platform using the MERN stack, enabling users and organizations to create, manage, and contribute to fundraising campaigns, with scalable backend architecture supporting multiple concurrent campaigns.
- Implemented an end-to-end test automation suite with Selenium, using modular locators, reusable components, and detailed logging to streamline testing of login and campaign management features.

Tech Stack: ReactJS, NodeJS/ExpressJS, MongoDB, Stripe, Selenium, BcryptJS, JWT

Technical Skills

Languages & Frameworks: Python, Java, JavaScript, SQL, ReactJS, ExpressJS, Numpy, Pandas, Sklearn, LangChain

Databases & Data Analysis: Supabase, MongoDB, Hadoop, HBase, Hive, Spark, MapReduce, Tableau, Power BI

Tools & Platforms: Git/GitHub, Docker, Postman, Vercel, Ubuntu, Figma

Position of Responsibility

Students Developers Club – Tech Head	Aug 2024 – Present
---	--------------------

- Led technical planning and execution of 5+ student developer events annually, while mentoring 3+ project teams to ensure on-time delivery, code quality, and team collaboration.

Achievements

Secured a Top 5 finish among 50+ teams at Coherence '25 for building a blockchain-based digital identity platform enabling secure, verifiable credential sharing.	Mar 2025
