SUMMARY

A profoundly motivated individual eager to embrace fresh challenges. Possessing a robust work ethic, adaptability, and outstanding interpersonal abilities. Demonstrates proficiency in operating autonomously and swiftly acquiring new proficiencies.

EDUCATION

Sardar Patel Institute of Technology

Bachelor of Technology in Computer Science (Specialization: Data Science) Current CGPA: 8.71

EXPERIENCE

Intern Developer , Nexgen

May 2023 to July 2023

- Coordinated installation of software systems and collaborated with the user experience team on the design and implementation of new features.
- Shadowed team engineers to learn new skills.
- Collaborated effectively with team members while maintaining a strong sense of individual responsibility.
- Provided technical support to the non-engineering team.

SKILLS

Debugging and Troubleshooting, Code Writing, Time Management and Organisation

Programming Languages: Java, PHP, VB.Net, Python, C, C++, JavaScript

Technologies & tools: Firebase, OracleDB, Sqlite, Figma, MySQL, Canva

Libraries/Frameworks: React.js, Selenium, Tailwind, Material UI, Numpy, Pandas

PROJECTS

Color Analysis Korean Skin Test (HackerRamp July 2024)

- Developed a personalized beauty recommendation platform that analyzes user skin, hair, and eye colors to suggest flattering makeup shades, jewelry styles, and color palettes.
- Designed an intuitive and interactive UI allowing users to try on recommended colors virtually, enhancing the user experience.
- Integrated image tools and AI algorithms to deliver accurate and tailored recommendations in real-time.

Far-e-wala (January 2024 - March 2024)

- Developed a comprehensive online marketplace connecting street vendors with customers, promoting the "Vocal for Local" initiative.
- Implemented Mapbox for vendor location visualization and Firebase OAuth for secure user authentication and onboarding.
- Enabled users to discover new street vendors or locate their favorite vendors in their area upon visiting the app.
- Designed a tailored menu for each vendor, showcasing available products, prices, and vendor-specific details.
- Equipped vendors with the ability to update their inventory in real-time, ensuring users see accurate availability.
- Integrated live vendor tracking using Haversine distance calculations, enabling customers to view the vendor's precise location and movement.

Autism Detection (March 2022-March 2023)

- Developed a diagnostic tool for Autism Spectrum Disorder (ASD) in adolescents, addressing the lack of efficient and accessible testing options.
- Implemented a gamified approach using engaging mini-games to collect behavioural data, making the process interactive and less intimidating for children.
- Streamlined the detection process, reducing the time, effort, and cost associated with traditional ASD assessments.
- Integrated multiple game-based methods to detect autism-related behaviours and patterns for comprehensive analysis.
- Designed the tool to generate structured Excel reports, enabling physicians to review and make informed decisions based on the collected data.

Suraksha Sathi (Mumbai Hacks 24:October 2024)

- Designed a women's safety project to provide real-time protection and preventative measures for individuals in vulnerable situations.
- Integrated features such as location tracking, wearable technology, and community involvement to enhance personal safety.
- Developed Anomalous Path Detection to alert users of unexpected route deviations and potential risks.
- Created a Proximity Alert Network to notify nearby users and authorities of potential threats.
- Empowered users with safety education and awareness tools to proactively manage their safety.
- Fostered a supportive community to encourage shared responsibility and create a safer environment for women everywhere.

Pothole Detection using Traditional Image Preprocessing Technique (September 2024 - October 2024)

- Developed a pothole detection system by applying preprocessing techniques like Gaussian Filtering, Otsu's Thresholding, Canny Edge Detection, and K-Means Clustering on a pothole dataset.
- Trained multiple models, including Random Forest, SVM, Logistic Regression, Naive Bayes, and Decision Tree, with Random Forest emerging as the best-performing model for accurate pothole detection.

ACHIEVEMENTS

- State Level Paper Presentation 2023 2nd Runner-Up
- State Level Technical Quiz Competition 2023 1st Runner-Up
- State Level Paper Presentation 2022 Winner
- Finalist of Webathon'24
- Vista 2025 Hackathon 2nd Runner-Up
