## Education

|                                                                               |             |
|-------------------------------------------------------------------------------|-------------|
| <b>Sardar Patel Institute of Technology</b> , Master of Computer Applications | 2024 – 2026 |
| • CGPA: 9.13 (Till SEM 2)                                                     |             |
| <b>M.L. Dahanukar College</b> , B.Sc. Information Technology                  | 2020 – 2023 |
| • CGPA: 9.25                                                                  |             |

## Experience

|                                                                                                                                                                                                                                                                               |                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Trainee Software Developer</b> , Benchmark Computer Solutions                                                                                                                                                                                                              | Nov 2023 – Aug 2024 |
| As a Trainee Software Developer at Benchmark Computer Solutions, I developed cross-platform mobile applications using Flutter. My role also included API development, as well as application testing and quality assurance to ensure robust and reliable mobile applications. |                     |

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Neura-Life</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Feb 2025 – Present  |
| <ul style="list-style-type: none"><li>Built cross-platform mobile application using Flutter that has video consultations and health tracking functionality.</li><li>Developed the Node.js backend with Express framework, used Socket.IO for real-time communication, implemented JWT authentication, and MongoDB database integration.</li><li>Integrated Google Speech-to-Text API for call transcription and custom BART ML model for medical summarization.</li><li>Implemented role-based access control with health questionnaires and personalized dashboards.</li></ul> |                     |
| <b>Colliers International ReConnect (Benchmark Computer Solutions)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Nov 2023 – Aug 2024 |
| <ul style="list-style-type: none"><li>Created a Flutter mobile application for property management on the iOS and Android platforms, increasing user engagement by 20%.</li><li>Added multilingual features supporting the Japanese, Korean and Traditional Chinese languages.</li><li>Developed a contact management and bookmarking system that reduces the response time to inquiries by 35% and increases the lead conversion rate by 15%.</li></ul>                                                                                                                        |                     |
| <b>Robinsons Global Logistics WMS (Benchmark Computer Solutions)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Feb 2024 – Aug 2024 |
| <ul style="list-style-type: none"><li>Designed warehouse management modules for five distribution centers, reducing order processing time by 30%.</li><li>Integrated Bluetooth barcode scanning functionality improving inventory accuracy from 60% to 90%.</li><li>Built offline-first application maintaining operational capability during network connectivity issues.</li></ul>                                                                                                                                                                                            |                     |
