

OMKAR JADHAV

Mumbai, Maharashtra | +91 7385649917 | omkarjadhav25032002@gmail.com | LinkedIn | GitHub

EDUCATION

Sardar Patel Institute of Technology

Master of Computer Applications (CGPA: 9.23/10)

Ajeenkya D.Y. Patil University

Bachelor of Computer Applications (Data Science) (CGPA: 7.70/10)

Mumbai, Maharashtra

Expected June 2026

Pune, Maharashtra

2021 – 2024

EXPERIENCE

Data Analytics Virtual Internship

May 2023 – July 2023

AICTE & EduSkills Foundation — Supported by AWS Academy

- Applied programming logic using Python (Pandas, NumPy) to automate data cleaning and transformation workflows
- Built and optimized SQL queries to retrieve and manipulate structured data — improving performance and readability
- Designed interactive dashboards using Power BI, focusing on end-user experience and modular data models
- Followed the CRISP-DM process lifecycle — gained hands-on experience in full-cycle development: from understanding requirements to deployment and presentation

PROJECTS

TransactGuard – Real-Time Fraud Detection Platform | Spring Boot, MongoDB, Thymeleaf [GitHub]

- Built a fraud detection engine using Spring Boot and MongoDB to analyze transaction patterns, velocity, and user behavior with 6 rule-based algorithms
- Implemented secure authentication with BCrypt hashing and session-based login; enabled real-time money transfers with balance validation
- Developed transaction filtering by date, amount, and recipient; supported user-specific views and queries
- Designed a responsive UI with Thymeleaf to display fraud alerts and dashboard analytics in real time

Teller Flow Optimizer – Bank Queue Simulation | Java, JavaFX, Groq AI API [GitHub]

- Developed a Java-based teller simulation system with scheduling algorithms (Greedy, Round Robin, Least Work Left), featuring CLI and JavaFX GUI
- Integrated Groq AI API to recommend optimal strategies from natural language inputs, improving assignment accuracy by 15–20%
- Applied queueing theory: priority queues, wait time tracking, and efficiency metrics, achieving up to 95% service efficiency
- Built modular architecture with algorithm comparison, test suite, and analytics dashboard; supported up to 10 tellers and 50 customers

SQL Sherlock – Query Validator and Scorer | PostgreSQL, SQL Views, Regex [GitHub]

- Developed a query validation tool using PostgreSQL to identify unsafe SQL patterns, non-optimal filters, and poor practices
- Implemented a rule engine combining SQL and regex to flag violations and suggest optimized query rewrites for code improvement
- Created scoring views to rank users based on SQL code quality and integrated GitHub for version control and collaboration

T20 World Cup 2024 Analytics | Python, JavaScript, Power BI, Web Scraping, Data Engineering [GitHub]

- Scraped match results, player bios, and scorecards from ESPN Cricinfo using custom JavaScript web scrapers
- Built Python (Pandas) pipelines to clean, merge, and transform match datasets using unique IDs
- Created Power BI dashboards to track team/player performance, trends, and insights

TECHNICAL SKILLS

Languages: Java, Python, SQL, HTML, CSS

Frameworks & Tools: Spring Boot, JavaFX, Thymeleaf, Regex, GitHub

Databases: PostgreSQL, MySQL, MongoDB

CERTIFICATIONS

Spring Boot Course: Certified Course for Essential Skills — Scaler Topics [Certificate]

Programming for Everybody (Python) — University of Michigan (Coursera) [Certificate]
