Education

Master of Computer Applications (MCA)

2024–2026

Sardar Patel Institute of Technology, Mumbai

CGPA: 7.91

Bachelor of Computer Applications (BCA)

2021–2024

College of Computer Science and Technology, Latur

CGPA: 9.00

Technical Skills

Languages: Java (OOP, Exception Handling, Multithreading), Python, SQL, JavaScript (ES6+), C++

Web Development: React.js, REST/SOAP Web Services, HTML5, CSS3, Node.js

Databases: Oracle (PL/SQL, Optimization), MySQL, MongoDB

Tools & Frameworks: Spring Boot, JDBC, Docker, Git, Postman

Fundamentals: Data Structures & Algorithms, SDLC

Projects

End-to-End Digital Banking Solution

2025

- Led the design and implementation of secure RESTful and SOAP web services for core banking operations, including account creation, fund transfers, and transaction history, ensuring compliance with security and data integrity standards
- Engineered a modular and scalable backend architecture using Java and Spring Boot, integrating Oracle database for real-time data processing and storage
- Followed complete SDLC methodology, actively participating in requirement analysis, agile sprints, code reviews, and deployment pipelines using Docker and CI/CD practices
- Demonstrated strong problem-solving skills by optimizing database queries, reducing latency by 30%, and handling 100+ transactions per second reliably

eCommerce Platform with Real-Time Analytics

2024

- Built a responsive front-end using React.js, integrating with REST APIs to enable dynamic product browsing, user authentication, and order management
- Developed backend services in Java with secure API endpoints and MongoDB data layer, including algorithms for recommendation engines using machine learning APIs
- Implemented data structures and efficient algorithms to optimize search and filtering functionalities, improving user experience and system speed
- Managed continuous integration using GitHub Actions, automating testing and deployment for rapid iteration

Library Management System (Team Project)

2024

- Collaborated in a team of 5 to design and develop a library automation system supporting 10,000+ books and 1,000+ members
- Built modules for book management, member registration, and fine calculation, following object-oriented principles and database normalization
- Utilized Java with JDBC to connect to Oracle database, implementing transaction management and stored procedures for efficient data handling
- Applied SDLC phases with iterative testing, documentation, and deployment, ensuring system robustness and scalability

Achievements

Academic Excellence: Graduated BCA with 9.00 CGPA, ranking in top 5% of class
