

Vedant Onkar

Software Developer

Email: vedantonkar27@gmail.com | LinkedIn: vedantonkar27 | GitHub: VedantOnkar27

Professional Summary

A self-motivated and detail-oriented software developer with strong foundation in computer science and passion for building impactful applications. Experienced in full-stack development with expertise in Java, Spring Boot, and modern development practices. Seeking to contribute technical skills and problem-solving abilities to challenging software development projects.

Education

Master of Computer Applications

Bhavan's SPIT, Mumbai, Maharashtra

2024 - 2026

Bachelor of Computer Applications

RTMNU, Nagpur, Maharashtra

2021 - 2024

Technical Skills

- **Programming Languages:** Java, C++
- **Backend Technologies:** Spring Boot, REST APIs
- **Frontend Technologies:** HTML, CSS, React JS
- **Databases:** MySQL, MongoDB
- **DevOps & Tools:** Jenkins, Docker, Kubernetes, GitHub
- **Development Practices:** CI/CD, Version Control, System Design

Projects

Document Management System for SPIT

Technologies: MERN Stack, Database Design, System Architecture, Python ML

- Developed a comprehensive web and mobile application for managing academic documents including Letters of Recommendation, admit cards, placement offers, and internship certificates
- Designed and implemented a secure document tracking system that automated the entire workflow from submission to approval and storage
- Created a robust backend architecture with proper database schema design ensuring data integrity and efficient query performance
- Built responsive frontend interfaces that provided intuitive user experience for both administrators and students
- Implemented user authentication and authorization systems to control access based on roles and permissions
- Optimized application performance through proper indexing and database optimization techniques
- Enabled automated notifications and status updates for document processing workflows

Routing Algorithms Visualisation Platform

Technologies: Spring Boot, React JS, Graph Algorithms, Data Structures

- Engineered an interactive web application to visualize and demonstrate routing algorithms with real-time graphical feedback
- Implemented Dijkstra's algorithm for single-source shortest path and Floyd-Warshall algorithm for all-pairs shortest path using graph data structures
- Designed and developed efficient adjacency matrix representations for graph storage and manipulation
- Created a dynamic visualization system that displays algorithm execution step-by-step with node states and path highlighting
- Built a responsive React.js frontend with interactive graph editing capabilities allowing users to create custom graphs and set parameters
- Developed RESTful APIs using Spring Boot to handle algorithm computations and serve visualization data to the frontend
- Implemented performance optimizations to handle large graphs efficiently and provide smooth user experience
- Added features for algorithm comparison and performance analysis across different graph sizes and complexities
