

RITESH SHARMA

Nagpur, Maharashtra | sharmaji9579@gmail.com | +91-7219274799 | [linkedIn](#)

OBJECTIVE

I aim to apply my coding skills in Python, Java, SQL, and backend development to build practical, efficient solutions for real-world applications. With experience in developing full-stack platforms, chatbots, and recommendation systems, I am eager to contribute to meaningful projects. I am passionate about learning new technologies, solving challenges, and collaborating within teams to deliver valuable outcomes.

EDUCATION

Bharatiya Vidya Bhavan's Sardar Patel Institute of Technology, Mumbai, Master in Computer Application - CGPA: 9.05/10	Sept 2024 – June 2026
Saint Francis De Sales college, Nagpur Bachelor's of Science in Mathematics - Percentage: 78.85	Aug 2020 – June 2023
Saint Francis De Sales college, Nagpur HSC - Percentage: 75.23	Aug 2019– May 2020

PROJECTS

Legal Chatbot - Nyayadoot (Python | NLP | FastAPI | Machine Learning | REST APIs) | [GitHub](#)

- Developed an AI-powered legal chatbot using Python and FastAPI that processes user queries, retrieves relevant legal sections from pre-indexed acts using FAISS vector search, and provides AI-generated suggestions via the LLaMA API.
- Implemented keyword extraction from queries to dynamically search and retrieve matching legal cases through Selenium-based scraping of online legal databases.
- Integrated RESTful APIs to enable seamless, high-performance communication between backend systems and frontend interfaces.

College Management System (JSP | Servlet | MySQL | Maven) | [GitHub](#)

- Developed a full-stack college management platform with secure, role-based dashboards for admins, teachers, and students.
- Designed and implemented features for admins to create and manage user accounts, branches, courses, and efficiently allocate teachers to courses and branches.
- Integrated assignment and notes modules, enabling teachers to create and share materials, and students to view, submit, and manage their coursework through their dashboards.

Movie Recommendation System (Python | SQL | NLP) | [GitHub](#)

- Developed a movie recommendation app that provides personalized suggestions by analyzing user-selected movies.
- Built the backend using Python and SQL, managing database connectivity and integrating the IMDB API for real-time data.
- Implemented content-based filtering with TF-IDF vectorization using Kaggle datasets to generate recommendations.

SKILLS

Programming Language: C, C++, Java, Python, DSA, SQL

Web & Backend: JSP, Servlet, FastAPI, REST APIs

Version Control: Git, GitHub

Technologies & Tools: VS Code IDE, IntelliJ IDE, MySQL Workbench, Maven

Concepts: Software Engineering, DevOps

ACHIEVEMENTS

- Scored full marks in Mathematics in both SSC (2018) and HSC (2020) board exams.
- Served as Class Representative during B.Sc., coordinating between students and faculty and assisting in academic and administrative activities.
