PROJECTS

Pseudospeak

- Developed a secure chat platform enabling users to communicate anonymously without revealing personal identities.
- Built using HTML, CSS, Bootstrap, Tailwind CSS, Django, and integrated both SQLite3 and MySQL for persistence.
- Emphasized user privacy and real-time pseudonymous interaction.

GANN Projection Calculator

- Implemented a time-cycle forecasting tool using Gann theory to calculate squaring patterns and angular cycles from stock prices.
- Used Streamlit, Python, and custom logic to handle holiday-aware date projection.
- Compared projections across top/bottom/range squaring and angular intervals for confluence.

Anonymous Feedback Portal

- Built a full-stack application for users to post anonymous complaints and feedback about organizations.
- Tech stack: React, Material UI, Django REST Framework, and SQLite3.
- Focused on privacy and admin interface for managing submissions.

QuitMate — Smoking Cessation App

- Created a wellness platform to help users quit smoking by visualizing progress, health gains, and milestones.
- Developed using React and Tailwind CSS, and deployed with Vercel for live access.
- Includes motivational trackers, milestone charts, and progress feedback to support user commitment.
