Education

Sardar Patel Institute Of Technology

Master's in Computer Applications

Sep. 2024 – Sep. 2026

CGPA, 8.66

K.C. College

Bachelor of Science, Information Technology

June. 2021 – June. 2024

CGPA, 9.75

Relevant Coursework

- Data Structures
- Algorithms Analysis
- DevOps
- Digital Electronics
- Software Methodology
- Database Management
- Computer Networks
- Enterprise Java

Experience

Freelance Web Developer – GujuBoy Clothing

Jan 2024 – Mar 2024

Frontend Developer (E-Commerce)

Remote

- Designed and developed the frontend for a fully functional eCommerce platform using React.js as part of a freelance project for the GujuBoy Clothing brand.
- Implemented responsive UI/UX for product listings, category filtering, cart management, checkout workflows, and user profile handling.
- Collaborated with backend developers to integrate APIs for order management, payment (PhonePe), and inventory control using Express.js and MongoDB.

Projects

AlgoNudge | WXT, React, Hono.js, Gemini

[Github Link](#)

- Developed AlgoNudge, a Chrome extension that provides context-aware, Gemini-powered hints for LeetCode problems directly on the problem page, helping users debug and understand DSA questions more effectively.
- Engineered the extension using React, TailwindCSS, and WXT for frontend, and a Hono.js backend to securely interact with the Gemini LLM API, supporting real-time prompts and intelligent responses.
- Implemented a minimal UI, persistent API key storage, and robust message-passing architecture between the extension popup and content scripts; laid groundwork for conversational context.
- Designed an intelligent prompt framework that sends problem title, description, user code, and user queries to Gemini, enabling subtle, non-spoiler hints that mimic human mentorship — enhancing learning without revealing solutions.

OrganizeU - Kanban Project Management Tool | React, Node.js, Express.js, MongoDB, Tanstack Query [Github Link](#)

- Developed a full-stack project management tool based on the Kanban board methodology to help teams visually organize software development tasks.
- Implemented dynamic task boards, drag-and-drop task management, project categorization, and user collaboration using React.js and MongoDB.
- Leveraged React Query with queries, mutations, and optimistic updates to ensure smooth and responsive UX during tab transitions and data updates.

ConnectSphere | Mediasoup, WebRTC, TypeScript, Node.js, Express, WebSockets, React

[Github Link](#)

- Engineered a high-performance video conferencing application using a Mediasoup SFU (Selective Forwarding Unit) architecture to ensure scalability and minimize client-side resource consumption.
- Architected the Node.js backend with TypeScript, creating a robust WebSocket signaling layer to manage room state and orchestrate Mediasoup's server-side transports, producers, and consumers for efficient media routing.
- Developed a dynamic React front-end with the `mediasoup-client` library to manage local media devices, publish user streams, and efficiently render remote participant videos in real-time.

Technical Skills

Languages Java, C++, JavaScript, TypeScript, SQL, HTML/CSS

Technologies MERN Stack (MongoDB, Express, React, Node.js), Next.js, WebRTC, MediaSoup, Tanstack Query, ShadCN, Linux

Developer Tools Git, GitHub, VS Code, Postman, IntelliJ, Docker

Certifications/ Achievements

- **JavaScript Algorithms and Data Structures** - freeCodeCamp
- **3rd Place - WebWeavers (Dr. BMN College):** Led integrations in a web development hackathon, building robust features and database integrations for high-performance websites.
- **Dev Duo (NIT Trichy):** Qualified in the top 3 teams out of 30 in a competitive development hackathon.
