Education

- Sardar Patel Institute of Technology** Andheri, Mumbai
Master of Computer Application 2024 - Present
- Thakur College of Science and Commerce** Kandivali, Mumbai
Bachelor of Science in Information Technology CGPA 9.12 2021 - 2024

Experience

- AI Engineer at FilamentAI** April 2023 - Present
Designed and deployed **5+ real-time computer vision solutions** (intrusion detection, fire/smoke detection) using NVIDIA DeepStream, reducing false alarms. Collaborated with ML engineers to optimize model performance for CCTV systems. Partnered with the dashboard team to integrate AI alerts into a centralized monitoring interface, enabling clients to visualize incidents (e.g., overcrowding, safety violations) with time-series analytics.
Built a Flutter-based app with Socket.io for real-time notifications, working closely with the UI/UX team to design user-friendly alert cards and ensure seamless data flow from backend APIs.
Trained **5+ enterprise clients** to use the app and dashboard, reducing manual monitoring workload

Projects

- AI-Driven Computer Vision Surveillance System**
Developed a **real-time**, AI-powered surveillance system that integrated computer vision capabilities into existing CCTV infrastructure. The system was designed to detect various events, such as intrusion, overcrowding, fire/smoke, and safety kit compliance, enhancing security and operational efficiency.
Technologies: Python, NVIDIA DeepStream, Flutter, Socket.IO
- Intelligent Mobile Travel Guide** [Link](#)
Developed a mobile app for travel planning using **React Native** and **Flask** to help users create personalized travel itineraries and manage budgets efficiently. Utilized the **Traveling Salesman Algorithm** to optimize multi-stop travel routes. Integrated a budget estimation tool that allows users to set and track travel expenses across categories such as accommodation, transportation, and dining.

Certification

- 100 days of code: The Complete Python Pro Bootcamp for 2023**, Udemy [Certificate](#)
Completed an intensive Python Bootcamp, building a strong foundation in Python, data science, web development, and automation. Developed practical beginner projects to apply skills in real-world scenarios.
- Computer Vision and Image Processing- Fundamental**, NPTEL [Certificate](#)
Gained foundational knowledge in image manipulation, analysis, and processing techniques using Python. Developed hands-on skills with libraries like **OpenCV** and demonstrated abilities through beginner-level projects.

Skills

Languages: Python, Dart, SQL
Tools & Technologies: Flask, Deepstream, Node.js, MongoDB, Git & GitHub

Participation & Achievements

- 1st Place - Model Quest (NIT Trichy):** Trained a machine learning model with the highest accuracy, utilizing advanced techniques in data preprocessing and optimization algorithms.
- 3rd Place - Dev Duo (NIT Trichy):** Handled backend development for a fully functional website built within 3 hours, focusing on server-side logic and APIs.
- 3rd Place - WebWeavers (Dr. BMN College of Home Science):** Led backend development in a web development hackathon, building robust features and database integrations for high-performance websites.
