EDUCATION

Masters of Computer Application (9.23 CGPA)

Sardar Patel Institute of Technology

Aug 2024 - Present

Bachelor Of Science in Information Technology (9.88 CGPA)

Kishinchand Chellaram College

Aug 2021- July 2024

WORK EXPERIENCE

Full Stack Developer | AGenC.ai

July 2024 - Sept 2024

- Designed, developed, and optimized backend microservices using Node.js and FastAPI, improving scalability, modularity, and response times.
- Deployed and maintained LLM foundation models on AWS Bedrock, ensuring low-latency performance and consistent model availability.
- Handled manual deployments, server configurations, and environment management on Linux servers hosted via AWS LightSail.
- Integrated backend APIs into the frontend application, collaborating with UI developers to ensure seamless data flow and functionality.

PROJECTS

Rate Limiter: Centralized rate limiting service

<https://rate-limiter-zd7a.onrender.com/docs>

- Built a FastAPI-based rate limiter supporting custom per-route and per-role policies using Redis.
- Implemented API key authentication and IP-based protection for internal endpoints.
- Designed REST APIs for policy management, request checks, and log retrieval with OpenAPI docs.

GujjuBoy Clothing: E-commerce

<https://gujjuboyclothing.com>

- Developed a robust e-commerce platform using MERN with PhonePe Payment Gateway integration, ensuring secure and efficient transactions.
- Designed a scalable, user-friendly system for product management, order processing, and customer engagement, optimizing performance and usability.

Trek Planer: Trekking Planner

<https://tripplanner-f57v.onrender.com/main>

- Developed a trekking route planner that offers comprehensive itineraries, nearby stay recommendations, and popular attractions for trekking enthusiasts.
- Built using the MERN stack (MongoDB, Express.js, React, Node.js) to ensure a seamless and interactive user experience with high-performance efficiency.
- Integrated automated web scraping and multiple third-party APIs to deliver real-time, location-based trekking insights and fully customizable route planning.

SKILLS

- Languages:** C++, Python, JavaScript, SQL
- Frameworks and Technologies:** Node.js, Express.js, FastAPI, WebSockets, RAG
- Data Storage and Caching:** MongoDB, MySQL, Redis
- Cloud and Deployment:** AWS (LightSail, Bedrock), Git, Linux Server Management

PARTICIPATION & ACHIEVEMENTS

- 3rd Place – WebWeavers, Dr. BMN College:** Built the backend for a carbon footprint tracker using Node.js and Express.js, with authentication and database integration.
- Finalist – Dev Duo, Version 25 (NIT Trichy):** Developed a backend prototype during a short-format hackathon, focusing on API design, data handling, and rapid iteration under time constraints.
- Finalist – Pitch to Rich, Version 25 (NIT Trichy):** Presented a tech-based business solution in a Shark Tank-style event, showcasing backend feasibility, system design, and market viability.
