

Sarang Dhananjay Patil

☎ 8237892905 • ✉ sarangpatil2905@gmail.com • 🌐 github.com/sarangpatil2905

1 Objective

Aspiring Software Developer pursuing a B.Tech in Computer Science at Sardar Patel Institute of Technology. Proficient in Python, Java, C, C++, HTML, CSS, SQL, JavaScript, React, Node.js, and MongoDB, with a strong foundation in problem-solving and project development. Passionate about building innovative solutions and enhancing skills through collaborative and competitive environments.

2 Education

Bharatiya Vidya Bhavan's Sardar Patel Institute of Technology (S.P.I.T.) August 2023 – April 2027

Bachelor of Technology in Computer Science and Engineering GPA: 9.68

Matrix Academy School August 2021 – March 2023

Higher Secondary (Physics, Chemistry, Math, Computer Science) Percentage: 93%

Smt Taramai Vartak Memorial Academy – March 2021

Secondary (Science, Math, Marathi, English, Social Science, I.T.) Percentage: 94.6%

3 Technical Skills

- **Languages:** Python, Java, C, C++, JavaScript, HTML, CSS
- **Frameworks & Tools:** React, React Native, Node.js, MongoDB
- **Other:** Machine Learning, Database Management, Web Development, Competitive Programming

4 Projects

Real Estate – AI Sales Qualification Bot June 2025

Python, React, Node.js, MongoDB AI Agent Hackathon (1st Runner-Up, National Level)

- Developed an AI-driven chatbot using Python, React, Node.js, and MongoDB to analyze user inputs and predict real estate purchase intent with high accuracy.
- The system featured a React-based interactive front-end, Node.js for robust back-end logic, and MongoDB for efficient lead data storage.
- Secured 1st Runner-Up in a national AI Agent Hackathon, outperforming numerous teams across India.

Placement Website March 2025

React, Node.js, MongoDB National-Level Hackathon (Top 20 Teams, India)

- Created a comprehensive web platform using React, Node.js, and MongoDB to streamline campus placement processes, enabling seamless interaction among students, recruiters, and administrators.
- The dynamic React interface ensured user engagement, while Node.js and MongoDB handled scalable server-side operations and data management.
- Ranked in the top 20 teams at a national-level hackathon for innovative design and functionality.

Mental Health App*React Native, Python, Node.js, MongoDB, AI*

January 2025

Independent Project

- Developed a mobile application to promote mental health with features for mood tracking, resource access, and personalized feedback.
- Implemented a Python-based AI model to analyze user behavior, delivering tailored insights and recommendations to enhance well-being.
- Utilized React Native for a cross-platform user interface, Node.js for secure back-end APIs, and MongoDB for efficient data storage.
- Created independently to foster mental health awareness and user engagement through an accessible and intuitive design.

Water Footprint Calculator App*Python, Machine Learning*

May 2024

Independent Project

- Engineered a Python-based web application integrated with machine learning to assist farmers in calculating crop water usage.
- The app analyzed historical data to predict future water demands and provided actionable water management strategies, promoting sustainable farming practices.
- Developed as an independent project to address agricultural efficiency.

Traffic Management Website*JavaScript, HTML, CSS*

April 2024

Independent Project

- Designed a traffic simulation platform using JavaScript, HTML, and CSS to model and optimize traffic light systems.
- Implemented adaptive algorithms that dynamically adjusted traffic light timings based on real-time traffic data, improving flow efficiency.
- Created as an independent project to explore innovative traffic management solutions.

5 Extracurricular Activities

- Achieved top ranks in multiple national-level hackathons, including 1st Runner-Up in the AI Agent Hackathon (2025), honing problem-solving and teamwork skills under tight deadlines.
- Competed in competitive programming contests on platforms like Codeforces and LeetCode, strengthening algorithmic thinking and code optimization in Python, Java, and C++.
